

# SCREAMER LS

## SCREAMER LS

TALL FESCUE

### A LOW MAINTENANCE WINNER

- HIGH SEEDLING VIGOR
- EXCELLENT SPRING GREEN-UP
- VERY GOOD BROWN PATCH RESISTANCE
- IDEAL FOR LOW MAINTENANCE APPLICATIONS
- COLD TOLERANT

**Screamer LS** has very high seedling vigor, screaming out of the ground to crowd out weeds and get growing long before other tall fescue varieties. **Screamer LS** exhibits excellent spring green up and cold tolerance making it an ideal choice for northern climates. In addition **Screamer LS** has very good brown patch resistance. **Screamer LS** has a number of traits that make it an ideal variety for use in low maintenance applications along with lateral spread technology.

### NTEP DATA

VARIETY	TURF QUALITY MEAN	LEAF TEXTURE MEAN	SPRING GREENUP MEAN	RELATIVE GROWTH RATE*	BROWN PATCH TOLERANCE <sup>T</sup>
<b>SCREAMER LS</b>	<b>6.1</b>	<b>5.8</b>	<b>7.2</b>	<b>3.3</b>	<b>9.0</b>

### AREAS OF USE

- PROFESSIONAL LAWN AND LANDSCAPE
- HOME LAWN
- MUNICIPAL USE
- SPORTS FIELDS

### SEEDLING VIGOR

Screamer LS has excellent seedling vigor providing good ground cover and out competing weeds.

2013 NTEP Mean Seedling Vigor Rating

### GENETIC COLOR

Screamer LS has excellent genetic color. It's dark green color allows use in a broad range of applications.

2013 NTEP Mean Genetic Color Rating

**SEEDING AND OVERSEEDING** Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Screamer LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aeration, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

**MAINTENANCE** Screamer LS natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
